

ALL MY DUCKS

Shopify Build Action Plan

Sense Theme · EU Store · 2026

A phased guide to building the ALL MY brand experience on Shopify — from theme setup through to social and SEO.

00

Overview

This document outlines the complete build sequence for the ALL MY Shopify store, using the Sense theme. It is structured into four phases, moving from technical foundation through to pages, brand details, and the SEO and social layer. Work through each phase in order — later phases depend on earlier ones being in place.

1	2	3	4	5
Theme & Foundation	Product Pages	Homepage	Supporting Pages	SEO & Social
Do first	Highest impact	First impression	About, FAQ etc.	Do last

01

Phase 1 — Foundation

Before touching any page design, lock in the technical setup. Everything else depends on this being right.

Theme

Use the Sense theme. It is the strongest free option for beauty and personal care — its ingredient and feature highlight sections save significant custom work for a concentrate product brand.

Colours

Set brand tokens in the theme editor immediately. Deep Espresso #2B2724 as primary, Warm Cream #F5F0E3 as page background, Warm Beige Sand #DACBA5 as secondary.

Theme settings → Colours in the Shopify theme editor.

Fonts

Add the Google Fonts link tag to theme.liquid before : Outfit (300/400/500) and Comfortaa (700). Outfit handles all UI and body text. Comfortaa is the Sofia Pro Soft substitute for logo and headlines.

Edit code → Layout → theme.liquid

Logo & Favicon

Upload the duck pictogram SVG as the logo in Header settings, set position to Center. Upload the same pictogram as your favicon.

Navigation

Create two menus in Online Store → Navigation. "Header left" containing About and Contact. "Header right" containing Search and Products. Assign both in the Header section of the theme editor. Keep your existing main menu for the mobile drawer.

Header CSS

Paste the brand CSS block at the top of sections/header.liquid in Edit code. This applies brand fonts, colors, hover animations, and mobile drawer styling.

The custom CSS field has a 500 character limit — always use header.liquid instead.

Products

Add your products now, even as placeholders. Real product listings let you build and preview pages properly rather than working against empty collections.

02

Phase 2 — Pages

Build pages in this order. Product page first — it is the highest-converting page and requires the most attention.

Product Page

- Large image left (sticky), detail column right.
 - Name in Outfit Medium all-caps, description in Outfit Light.
 - Mission pills between description and size selector.
 - Add to Bag (Deep Espresso fill) + Add to Wishlist (outline).
 - Accordion: How to Use / Functions / Dosage / Payment & Delivery.
 - Active Ingredients grid in a cream-tinted inset panel.
 - Aroma strip below ingredients.
 - "See Also" product carousel at the bottom.
 - CRITICAL: The "How to mix" dosage section is the single most important conversion element — concentrate products require clear instruction or shoppers will not complete purchase.
-

Collection Page

- Two-column grid on desktop, one column on mobile.
 - Card shows: product image, name, size, price only — no badges.
 - Generous breathing room between cards.
 - Keep filters minimal.
-

Homepage

- Full-width hero: lifestyle image with headline in Sofia Pro Soft / Outfit.
 - Three-column mission bar: No Water Shipped, Naturally Gentle, Recycled Plastic.
 - Featured product section — two products side by side, airy layout.
 - "How it works" concentrate explainer strip — not optional.
 - Community or brand statement section.
 - Footer in Deep Espresso.
-

About Page

- Brand story in calm short paragraphs — no bullet lists.
 - Lead with the brand ethos: warm light in everyday rituals.
 - Mission icons in a row.
 - Photography carries the visual weight.
-

FAQ Page

- Essential for concentrate products. Anticipated questions:
 - How to use, shelf life, is the bottle sold separately,
 - shipping, and returns.
 - Write in brand tone: friendly, not clinical.
-

Contact Page

- Minimal: one line of copy, email form, social links.
 - Nothing more.
-

03

Phase 3 — Brand Details

These details distinguish the store from a generic Sense build. None are optional if the brand guide is to be respected.

Announcement Bar

Enable the built-in Sense announcement bar. Set background to Deep Espresso, text to Warm Cream. Copy: "No water shipped · 0% filler · Free EU shipping over €35". Keep it to one line.

Header Wordmark

"ALL MY DUCKS" is the correct digital logo per the brand architecture (p.6 of the brand guide). The primary packaging logo "ALL MY + pictogram" is used in the footer and in all high-stakes contexts: checkout, invoices, legal pages, marketplace listings.

Footer

Deep Espresso background. Four columns: brand logo + tagline, Shop links, Company links, Help links. Use the "ALL MY + pictogram" packaging identity — footer is a high-stakes context per the brand rule of dominance.

Colour Distribution

Warm Cream is the dominant background. Deep Espresso and Warm Beige Sand are the most prominent active colours. Clay Blush is a strategic accent only. Warm Amber Light is used at maximum 1% — hover states, tiny icons, highlights. Never invert this hierarchy.

Typography Hierarchy

Logo and main headlines: Sofia Pro Soft Bold (Comfortaa substitute). Headers and important information: Outfit Medium. Body text: Outfit Light. Never use more than these three weights in a single layout.

Logo Rules

Minimum logo width: 56px (standard), 89px (side-by-side). Clear space: minimum 1/3 of duck height on all sides, ideally 1/2. Do not rotate, skew, add shadows, glows, gradients or outlines. Do not place on low-contrast or busy backgrounds.

04

Phase 4 — SEO & Social

Do this last, once the store is live and pages are complete.

SEO Metadata

"ALL MY DUCKS" may appear in domain/URL, page titles, and meta descriptions per the brand architecture secondary signature rule. The primary packaging identity "ALL MY + pictogram" must not appear in meta titles.

Instagram Profile

Profile picture: duck pictogram monogram (not the full logo lockup). Bio tone: warm, clear, intelligent. Never preachy or clinical. Content pillars: Product, Community, Mission, Behind the Scenes, Tips & Tricks.

Social Content Tone

Warm — friendly without slang. Clear — short sentences and easy instructions. Intelligent — wording that respects the reader. Calm — confident without pressure. Sustainability is expressed softly, not loudly. We guide. We do not lecture.

Shopify Instagram Integration

Connect the Instagram sales channel once the store is live. Product tags in posts link directly to product pages.

05

Quick Reference — Brand Tokens

Token	Value	Usage
Deep Espresso	#2B2724	Primary text, logo, CTAs, footer bg
Warm Beige Sand	#DACBA5	Amber bottles, packaging, prominent digital
Clay Blush	#C9B2A3	Strategic accent only
Warm Cream	#F5F0E3	Page background, breathing room
Sage Water	#DDE6E3	Digital accents, water messaging
Warm Amber Light	#E2B786	Max 1% — hover states, tiny icons
Logo font	Comfortaa 700	Sofia Pro Soft substitute
UI / Headers	Outfit 500	All caps, letter-spacing 0.12em
Body text	Outfit 300	Min 7pt print, 8.5px digital
Min logo width	56px (std)	89px side-by-side, 93px wordmark

The product page and homepage will take the most time and deserve the most attention. The educational "how concentrates work" element is the single most important conversion-driving piece of content on the whole store — treat it as carefully as the logo itself.
